

COMBUSTIBLE FLOOR BASE INSTALLATION

MODEL: CFB23A

This combustible floor base is designed for use with FC series furnace and will provide the appropriate clearance to combustible flooring materials when installed in accordance with these instructions.

NOTE: This base is required when installing a cooling coil box on combustible flooring.

The floor base is shipped completely assembled and ready for installation. A hole must be cut in the flooring as dimensioned in the illustration below. Make sure to use the correctly sized floor base for the furnace being installed. Make sure that the two strips of insulating tape are in place and secure on both the top and bottom of the base assembly. Once the hole is cut into the floor, insert base with clearance support down through the hole as illustrated.

Once the base is in place the coil box and/or furnace may be set on the base.

NOTE: Furnace over hangs the front of the combustible floor base 7 inches.
