**MANUAL 2100-185 REV. A
SUPERSEDES REV.**

ENERGYGUIDE INFORMATION

The cost grids on the fact sheets are based upon representative incremental rates that should correspond to the type of fuel being considered.

IMPORTANT: All cost grid data are "estimated yearly operating costs". Your actual yearly operating costs are dependent upon such factors as weather severity, routine maintenance items affecting operating efficiency (filters, blowers, etc.), actual heat loss of structure, desired indoor temperatures, living patterns of the occupants, and other items affecting operating time of the heating appliance.

To use the cost grids, it is necessary to know the heat loss of your home or building and the energy rate for your area. If not already known, the heat loss can be calculated by the dealer, builder, architect, etc., and the current energy rates obtained from the appropriate local utility.

Even without the specific information listed above, the cost of operation of competitive models can be compared by using similarly rated input models and their respective fact sheets and using the same heat loss of house and energy cost values on each fact sheet.

An example of how to use the enclosed information is as follows:

| | |
|-------------------------------|----------------------------------|
| Geographic Location: | Ohio--From Region Map: Region IV |
| Heat Loss of Building: | 70,000 Btu/h |
| Heat Appliance Model Desired: | WPV53B |

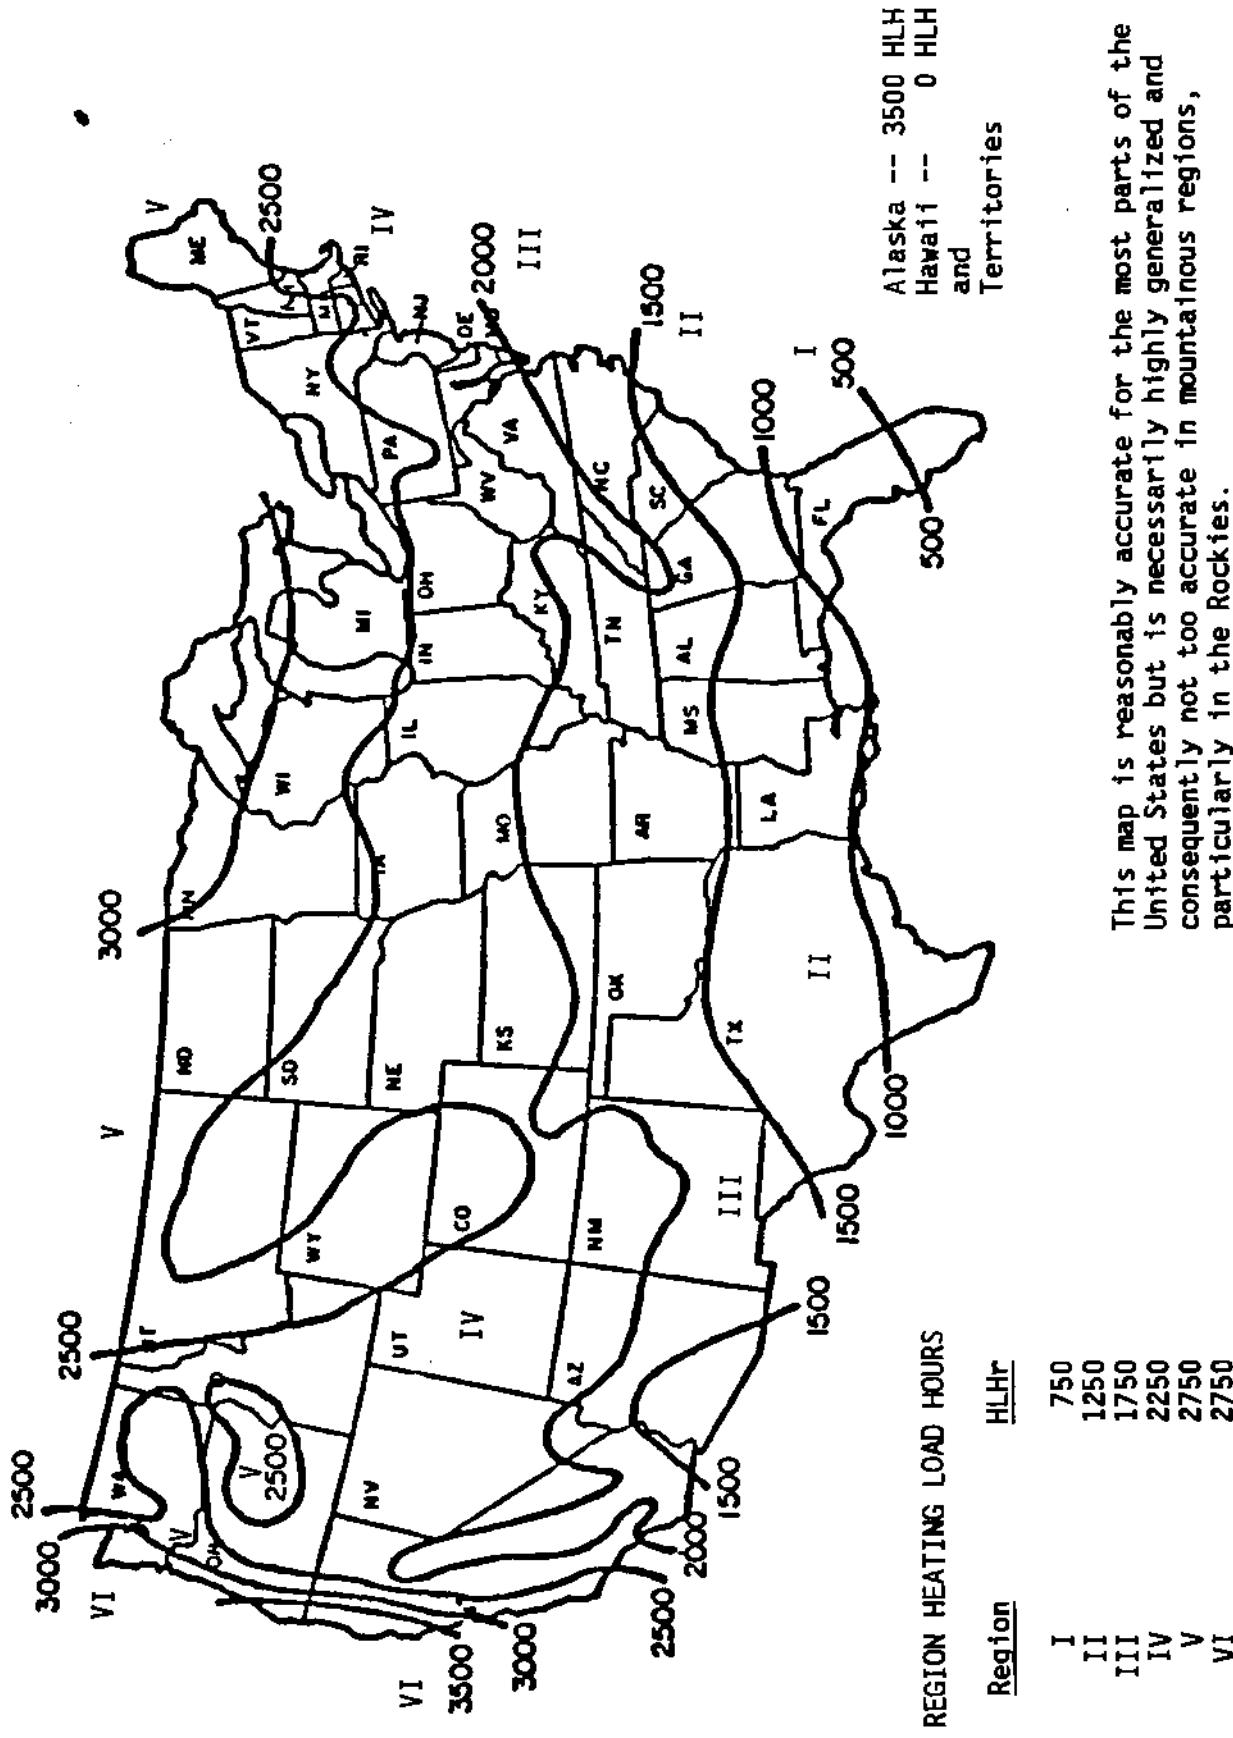

Consulting the Region IV cost grid (1) and moving down the 70,000 Btu/h (2) column to the \$.110 cost per kilowatt hour line (closest value to actual cost determined by contacting local utility) (3), the estimated cost per year to operate is \$1,437.00.(4)

| * HEAT LOSS OF HOUSE (1000 BTU HR) * | | | | | |
|--------------------------------------|-----------|------|------|-------|---------|
| | 40 | 50 | 60 | 70(2) | 80 |
| * ESTIMATED \$ PER YEAR TO OPERATE * | | | | | |
| Cost | \$.050 | 386 | 470 | 554 | 653 |
| Per | \$.070 | 541 | 658 | 776 | 915 |
| Kilowatt | \$.090 | 695 | 846 | 998 | 1176 |
| Hour | \$.110(3) | 850 | 1034 | 1219 | 1437(4) |
| | \$.130 | 1004 | 1222 | 1441 | 1698 |
| | \$.150 | 1158 | 1409 | 1662 | 1959 |

\$Cost based on region (1)

Heating load hours (2250)

ACTUAL HEATING LOAD HOURS (HLH_A) AND REGIONAL HEATING LOAD HOURS (HLH_R) FOR THE UNITED STATES

This map is reasonably accurate for the most parts of the United States but is necessarily highly generalized and consequently not too accurate in mountainous regions, particularly in the Rockies.
